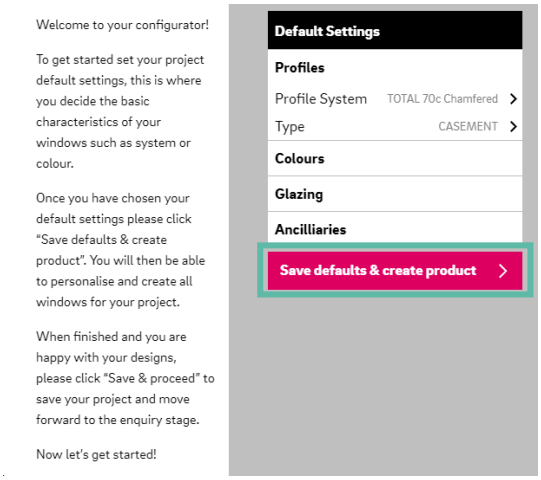
Step by Step instruction - How to build a French Window

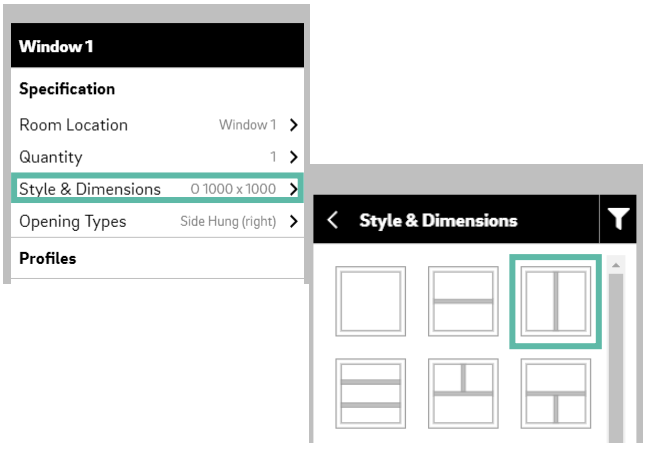
1st Step:
Create your Defaults settings:

The default settings set the preferences for all windows you create in a project. If you change the settings here, all windows will be updated.
If you are ready click on „Save defaults & create product”

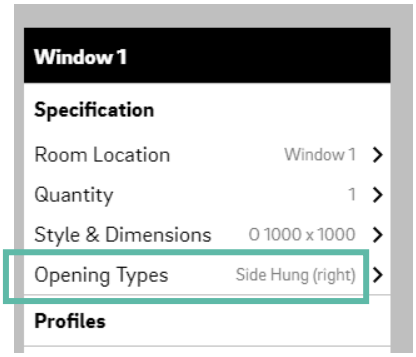


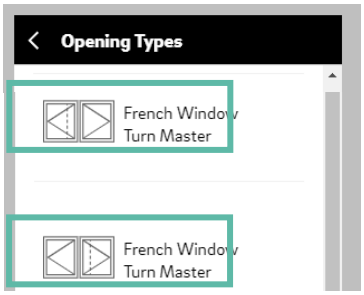
2nd Step:
Change Style and Dimensions:

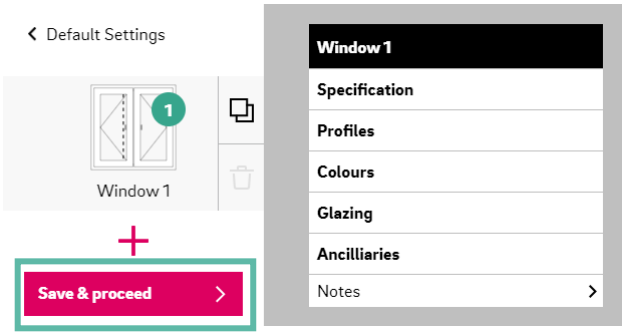
Click on “Style and Dimensions” and choose the bipartite partition. You can also change the dimension of your window if you have to



3rd Step:
Change Opening Types:
Click on “Opening Types”, scroll down and select French Window Turn Master and decide if you would like to have a left or light turn master which is displayed by the dashed line







4th Step:
Make the additional changes and click on “Save & proceed”:
You can now go on to create the window more specific. E.g. you can change the glazing or handles, add bars or make specific notes for your fabricator. You can also change the quantity if you need more identical windows or add a new one. In the end don´t forget to click on “Save & proceed” and send a quotation request to your connected fabricator. He will take care of your quotation.
