

Step by step instruction - How to build an AGILA composite door

1st Step:

Create your Defaults settings:

The default settings set the preferences for all windows you create in a project. If you change the settings here, it updates all windows. It pertains also to doors. If you are ready click on „Save defaults & create product”

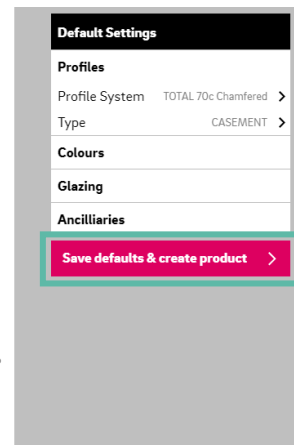

Welcome to your configurator!

To get started set your project default settings, this is where you decide the basic characteristics of your windows such as system or colour.

Once you have chosen your default settings please click "Save defaults & create product". You will then be able to personalise and create all windows for your project.

When finished and you are happy with your designs, please click "Save & proceed" to save your project and move forward to the enquiry stage.

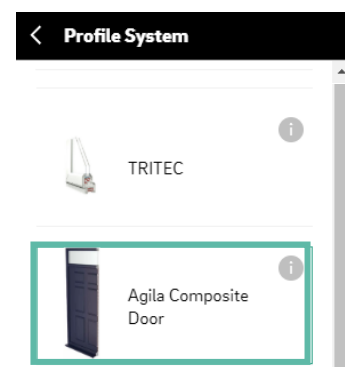

Now let's get started!

2nd Step:

Change Profiles System

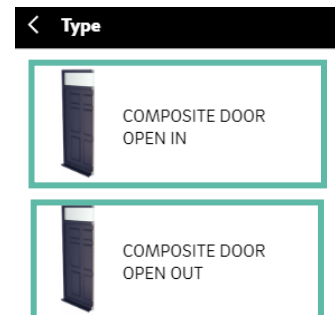

Click on "Profile System" and select profile system „AGILA Composite Doors”

3rd Step:

Change Type:

Click on “Type” and select “AGILA Composite Door Open In” or “AGILA Composite Door Open Out” wether you would like to have an inside or outside opening door.

4th Step:

Define composite panel:

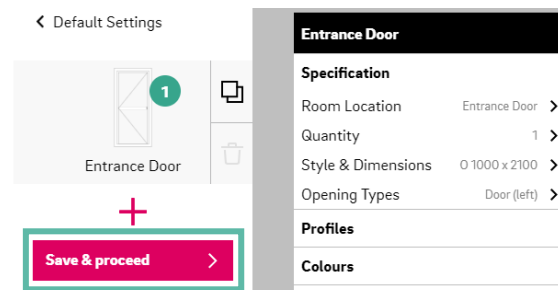

You can add all information in text format your fabrcator need to manufacture your requested door.

5th Step:

Make additional changes and click on “Save & proceed”:

You can now create the door more specific. E.g. you can change the dimension or partition. If you change the partition just define with the “Opnenig Types” where you would like to have the door. In the end don't forget to click on “Save & proceed” and send a quotation request to your connected fabricator. He will take care of your quotation.
