

PRESSEINFORMATION

System Solutions for Windows and Doors: High-Tech for Top-Class Innovations.

REHAU Window Solutions at Fensterbau Frontale 2026.

- **Full focus on Window Professionals: Innovation driver REHAU Window Solutions strengthens window manufacturers and installers as an All in One Partner.**
- **New: Lift-and-slide door and front door for the ARTEVO system.**
- **New: 80 mm system platform offers maximum application versatility with minimal complexity.**
- **New: SYNEGO SLIDE now also available with opening configuration C.**
- **New: SLINOVA and SLINOVA X with a wide range of additional options.**

REHAU Window Solutions brings together window, sliding and door applications on a unified 80 mm system platform, thereby creating synergies across different product segments. Glazing beads, floor thresholds and add-on components that can be used across systems reduce the range of variants and streamline planning, stockholding and manufacturing. The platform enables both volume and premium applications to be accommodated within a clear system logic.

Erlangen, 24 March 2026 – As leading All in One Partner, REHAU Window Solutions will be showcasing innovations and further developments in the systems business at Fensterbau Frontale 2026, which will provide window professionals with targeted support in the form of optimum workability, maximum efficiency and maximum differentiation in the market.

ARTEVO: Premium System with New Applications

REHAU Window Solutions expands the premium system ARTEVO with a new lift-and-slide door and a new front door solution. Both applications address modern design with large-format execution, combining high performance with a comprehensive platform strategy as well as manufacturing efficiency and a strong sustainability profile.

The **ARTEVO lift-and-slide door** complements the portfolio with a robust and durable solution for demanding sliding applications. With the new EASYSTEP 80LS premium zero threshold, REHAU Window Solutions increases comfort and supports barrier-free transitions for a wide range of opening types.

The **ARTEVO front door** is also part of the modular system and significantly speeds up production. A newly developed reinforcement eliminates the need for pre-assembly on the lock side, while a mechanical connection of the front door panel replaces the previous 24-hour curing time for pure adhesives.

At the same time, ARTEVO expands the range of applications in the plastics sector: options **up to 1.35 m wide and 2.50 m high** enable PVC-based **escape and panic doors** for the first time. An integrated cable duct facilitates the integration of smart components and subsequent retrofitting. The combination of the core formulation of **RAU-FIPRO X** and new reinforcement reduces warping and increases stability in the lock case area.

With ARTEVO, REHAU Window Solutions is pursuing a product-based approach in which profile solutions are created as integrated systems throughout their entire life cycle – from design and manufacture to application in the market. Unique innovative capabilities result in groundbreaking products based on maximum efficiency.

“ARTEVO embodies REHAU Window Solutions’ claim as All in One Partner of the highest innovation capability at product level. New applications such as the lift-and-slide door and the front door, together with the ARTEVO window, unite maximum performance, efficient processability and minimal complexity with outstanding sustainability in a single platform. This combination positions ARTEVO as the reference product in the market. The ARTEVO platform enables partners and customers to achieve differentiation and added value in competition, and with it growth opportunities in the market,” says Frank Zimmermann, Chief Technology Officer (CTO) of REHAU Window Solutions.

Unified 80 mm System Platform: Simple and Efficient.

REHAU Window Solutions brings together window, sliding and door applications on a unified 80 mm system platform, thereby creating synergies across different product segments. Glazing beads, floor thresholds and add-on components that can be used across systems reduce the range of variants and streamline planning, warehousing and manufacturing. The platform makes it possible to map volume and premium applications within a clear system logic.

SLINOVA and SLINOVA X: Additional Options for New Areas of Application.

REHAU Window Solutions presents SLINOVA and SLINOVA X with targeted further developments. A stainless steel running rail for SLINOVA X increases corrosion resistance. A new Eco variant of the barrier-free floor threshold with an optional approach ramp extends the range of possible applications. A revised cover profile and the new handle Novem for SLINOVA X, which stands for aesthetics and intuitive operation, further expand the design possibilities.

SYNEGO SLIDE: Expansion to include opening scheme C.

REHAU Window Solutions is expanding its SYNEGO SLIDE sliding system to include opening scheme C, thereby covering almost all standard market configurations. The expansion increases planning flexibility and consistently rounds off the portfolio. REHAU

Window Solutions is testing the system with ROTO Inowa fittings and is using only three additional components for implementation: a rebate gasket, end cap and adapter rail. For the first time, a 3D-printed end cap is integrated. Partners are provided with the necessary STL file.

Full focus on window professionals

With the profile solutions presented at Fensterbau Frontale 2026, REHAU Window Solutions underlines its claim as All in One Partner with outstanding innovation capability. ARTEVO as the product-level highlight, the unified 80 mm system platform and targeted expansions in the sliding segment establish the foundation for economically viable, market-ready and future-proof solutions along the entire value chain. The innovations from REHAU Window Solutions at the Nuremberg world-leading trade fair focus on these growth modules:

- **Profile Solutions: High-Tech Materials for Top-Class Innovations.**
- **System Accessories with Added Value: Attractive Additional Options from a Single Source.**
- **Smart Products: Modern. Clever. Perfectly Integrated.**
- **Digitalisation Perfected. Simple. Efficient. Seamlessly Connected.**
- **Sustainability: Responsibility in action.**
- **Innovative Strength: Pioneering Technologies and Developments for New Additional Business Models.**

REHAU Window Solutions 2026.

All in One Partner. Tailored to Your Success.

Create Difference. Grow Business.

The REHAU Industries Division Window Solutions reinvents windows and doors every day. For a better life. Its unique recycling approach EcoPuls represents an unrivalled sustainability concept within the industry. As a thought leader and driver of future-ready industry solutions, REHAU Window Solutions is the leading All in One Partner for holistic system solutions along the entire value chain: Windows. Reinvented for modern life.

The REHAU Group brings together companies from the construction, industrial engineering, materials, medical, mobility and furniture sectors under one roof. With polymer-based solutions, this globally operating family business generates annual revenues of approximately EUR 3 billion. A pioneering spirit and visionary drive inspire more than 13,000 employees worldwide to improve people's lives through the application of innovative technologies. Engineering progress. Enhancing lives.
