REHAU System Accessories with Added Value:

Attractive Additional Solutions from the All in One Partner.

REHAU Window Solutions at Fensterbau Frontale 2026.

- **Innovation Expertise in the System: System Accessories from REHAU Window Solutions demonstrate the perfect translation of innovation into attractive additional solutions for installation, surface finishing and fittings.**
- **New 2026 – Installation & Safety: high insulation substructure profile, new connection flanges and certified fastening solutions for process-reliable connections.**
- **New 2026 – Comfort & Protection: Floor threshold EASYSTEP 80 LS, new French glass balcony solution and new roller shutter boxes expand the range of applications.**
- **All in One Partner: Additional options within the system portfolio create added value through single-source solutions.**

REHAU System Accessories as a Driver of Innovation and Differentiation: The new solutions presented at Fensterbau Frontale 2026 demonstrate how REHAU Window Solutions makes innovation expertise quickly and easily applicable for window professionals – from installation and safety through surface finishing and design to comfort and protective solutions. As a leading All in One Partner, REHAU Window Solutions combines this innovative strength with exceptional system depth, translating it into practical, market-ready components. These enhance efficiency, promote differentiation and open up new business models.

Erlangen, 24 March 2026 – At Fensterbau Frontale 2026, REHAU Window Solutions presents a comprehensive range of new System Accessories. They underline that innovation leadership at REHAU Window Solutions, built on leading profile systems, offers attractive success modules in areas such as installation, surface finishing, safety and fittings. The new solutions create tangible added value for window professionals across planning, manufacturing and installation – all from a single source.

Installation & Safety: New System Solutions for Connections and Fixings

REHAU Window Solutions expands its System Accessories portfolio with certified, closed system solutions covering subframe construction, sealing and fixing: the focus lies on the high insulation substructure profile and the REHAU connection flanges in both standard and universal variants. New to the range is the narrow connection flange from a joint width of just 13 mm. The aim is reliable, standard-compliant installation, particularly for floor-to-ceiling elements. For ARTEVO without reinforcement, REHAU Window Solutions supplements this concept with newly certified SFS frame fixings featuring clearly defined design values. Stand-off fixing without back-blocking, coverage of standard cases 1 and 2 in the installation guide, and through-fixing across different substrates all demonstrate that innovation expertise consistently encompasses fixings and structural verification.

- **Certified system solutions for maximum liability safety.**
- **New connection solution for very narrow joints.**
- **Planning and installation are straightforward and efficient.**

Comfort & Performance: New System Threshold EASYSTEP 80 LS

With the floor threshold EASYSTEP 80 LS, REHAU Window Solutions introduces a new system threshold for the lift-and-slide door systems ARTEVO and SYNEGO. The threshold, system and connection profiles all originate from a single source and are technically optimised to work in perfect harmony. Interfaces are reduced. The use of the high-tech material RAU-FIPRO X ensures high stability without additional reinforcement and reduces weight. Pre-assembled components, classic through-bolting from below and optimisation for the REHAU connection flange significantly enhance installation efficiency.

- **Threshold and lift-and-slide door system from a single source, directly from the All in One Partner.**
- **Optimal technical coordination eliminates unnecessary connection profiles.**
- **Fully compatible with subframe profiles from REHAU Window Solutions.**
- **Simple and secure installation through pre-assembled components, classic threshold installation with through-bolting from below, flush surfaces for straightforward sealing without a sealing plate, and optimised for use with the REHAU Window Solutions connection flange.**
- **Implementation of the “on-site installation” variant will follow in a subsequent development phase.**
- **Available for lift-and-slide doors in grey and black.**

Visibility & Safety: New French glass balcony in the System

The new French glass balcony within the REHAU Window Solutions system is distinguished by its particularly slim, minimal construction depth and offers visual installation control thanks to specially designed screw washers. The French glass balcony is highly versatile in application: with aluminium facing shell, with ELVIAL aluminium window profiles, externally on aluminium roller shutter guide rails or between the window and roller shutter armour. All required test certificates, including fixings to the structural load-bearing element, are available. The product launch is planned for the third quarter of 2026.

- **Exclusive solution with minimal space requirement.**
- **High flexibility in installation and system combination.**
- **Certified safety and clear installation control.**
- **Product launch anticipated in Q3 2026.**

Market-Specific Systems & Details: Roller Shutter Boxes and TALIA S

Also newly presented, REHAU Window Solutions introduces market-specific PVC add-on boxes for markets including the Balkans and Spain. The systems are designed for new

builds and renovation projects and are available in various specification variants – with or without insect screen, manually or electrically operated.

The window handle TALIA S adds a new detail solution to the portfolio. The special detent mechanism prevents unintentional displacement of the fitting, whilst the design and surface finish visibly enhance the quality perception of the window element.

Full Focus on window professionals

System Accessories make clear what REHAU Window Solutions stands for: unique innovation expertise, combined with the breadth of options and opportunities that a leading All in One Partner provides. The solutions demonstrate how the experts at REHAU Window Solutions think innovation through consistently to the finest detail, translating it into practical, rapidly buildable and therefore commercially viable systems – for greater efficiency, clear differentiation and new business models along the entire value chain. The innovations from REHAU Window Solutions at the Nuremberg world-leading trade fair focus on these growth modules:

- **Profile Solutions: High-Tech Materials for Top-Class Innovations.**
- **System Accessories with Added Value: Attractive Additional Options from a Single Source.**
- **Smart Products: Modern. Clever. Perfectly Integrated.**
- **Digitalisation Perfected. Simple. Efficient. Seamlessly Connected.**
- **Sustainability: Responsibility in action.**
- **Unique Innovative Strength: Pioneering Technologies and Developments for New Additional Business Models.**

REHAU Window Solutions 2026.

All in One Partner. Tailored to Your Success.

Create Difference. Grow Business.

The REHAU Industries Division Window Solutions reinvents windows and doors every day. For a better life. Its unique recycling approach EcoPuls represents an unrivalled sustainability concept within the industry. As a thought leader and driver of future-ready industry solutions, REHAU Window Solutions is the leading All in One Partner for holistic system solutions along the entire value chain: Windows. Reinvented for modern life.

The REHAU Group brings together companies from the construction, industrial engineering, materials, medical, mobility and furniture sectors under one roof. With polymer-based solutions, this globally operating family business generates annual revenues of approximately EUR 3 billion. A pioneering spirit and visionary drive inspire more than 13,000 employees worldwide to improve people's lives through the application of innovative technologies. Engineering progress. Enhancing lives.
