Sustainability: Successfully implementing Responsibility.

REHAU Window Solutions at Fensterbau Frontale 2026.

- **REHAU Window.ID: The digital window passport anticipates the EU Digital Product Passport and ensures future readiness.**
- **100 % recyclate self-sufficiency: Three certified recycling plants with a capacity of 70,000 tonnes cover the entire demand of our in-house production.**
- **Material expertise: The materials RAU-FIPRO X and RAU-INFINIO enable high-quality recyclates and fully recyclable high-performance profiles.**
- **65 % of profiles contain recyclate: Consistent use of recyclates saves 100,000 tonnes of CO₂ per year.**
- **All in One Partner: Closed-loop circular economy fully in our hands – from material take-back through to digital documentation.**

Under the motto "All in One Partner. Tailored to Your Success.", REHAU Window Solutions demonstrates at Fensterbau Frontale 2026 how material expertise and a closed-loop make sustainability a measurable driver of success. With REHAU Window.ID, three certified recycling plants and innovations such as RAU-FIPRO X and RAU-INFINIO, window professionals benefit from high recyclate availability and measurable CO₂ savings.

Erlangen, 24 March 2026 – REHAU Window.ID is the pioneering digital window passport. It gives every window seamless traceability across the entire lifecycle and anticipates the EU Digital Product Passport (DPP). For window professionals, this translates into tangible benefits:

- **Window.ID** automatically fulfils future EU reporting obligations.
- Direct digital contact with the end customer generates **lucrative follow-up business**.

“Sustainability in action makes the partners and customers of REHAU Window Solutions fit for their future. Together, we shape individual success models through decades of material expertise, consistent innovation leadership and the aspiration to continuously create attractive new business options along the value chain. Today, solutions such as the Window.ID already fulfil what will be mandatory tomorrow – and **make sustainability a measurable success factor for our partners and customers**,” says Carsten Heuer, CEO of REHAU Window Solutions.

Complete Recyclate Self-Sufficiency Through Three Certified Plants

REHAU Window Solutions operates three own recycling plants with a combined capacity of 70,000 tonnes per year. On a balance sheet basis, these plants cover the entire recyclate requirement of our in-house production. This provides planning reliability: window professionals are independent of market fluctuations and benefit from consistent quality through QM certifications.

The material expertise of REHAU Window Solutions enables innovations that go well beyond conventional recycling. RAU-FIPRO X is a fibre-reinforced core compound that enables high-quality recyclate content even in structurally demanding profiles. The result is slender sightlines for architectural transparency with optimum structural performance, as found in ARTEVO systems. Fully steel-free floor thresholds with high proportions of recycled material are a further consequence of this material expertise.

RAU-INFINIO goes one step further: Glass long fibre technology uses thermoplastic pultrusion with virtually endless glass fibres. The result is profiles with E-moduli on a par

with aluminium while remaining fully recyclable – made possible by thermoplastic binders instead of non-recyclable resins. The single-type processing of these hybrid materials creates particularly high-quality components for closed loops.

“We deliberately collect hybrid materials in sorted form. They are of particularly high quality and can be recycled repeatedly. Our partners and customers benefit from this significant step towards our fully closed circular economy,” says Robert Adams, Head of Sustainability & Circular Operations at REHAU Window Solutions.

EcoPuls: 65 Percent of Profiles Contain Recyclate

REHAU Window Solutions is setting benchmarks in the circular economy: More than 65% of REHAU’s production volume in Europe is already manufactured using recycled material and contains between 25% and 80% recycled content – depending on the profile design and system variant.. The use of recycled material saves 100,000 tonnes of CO₂ annually – equivalent to the binding power of around eight million trees. The production of recyclates generates 88 percent less CO₂ emissions compared to virgin PVC. ARTEVO systems naturally fulfil affordable housing requirements with slender sightlines and high-quality recyclate content – made possible by RAU-FIPRO X technology.

All in One Partner – Holistic Solutions Along the Entire Value Chain

The trade fair motto “All in One Partner. Tailored to Your Success.” represents REHAU Window Solutions’ approach to implementing sustainability comprehensively along the entire value chain:

Take-back & Recycling: Three certified plants process old windows, roller shutters and production offcuts. Individual logistics solutions cover Europe and are tailored to different business sizes.

System Solutions: EcoPuls profiles offer solutions with a high recyclate content. Innovation leadership in materials continuously creates new opportunities for higher-quality

recyclate content and recyclable high-performance profiles. The 80 mm system platform, for example, offers maximum component compatibility.

Digital Services: REHAU Window.ID anticipates the EU Digital Product Passport and automatically delivers ESG-compliant data. This supports window professionals with DGNB, LEED and BREEAM certifications using verified sustainability data.

Reporting: ESRS-compliant reporting provides planning reliability. Verified CO₂ data flows directly into customers' Scope 3 calculations. **“We develop systems rather than individual profiles and from the very start we take production, assembly, service and digital connectivity into account. REHAU Window Solutions is the leading All in One Partner also with regard to lived sustainability. That makes the decisive difference for window professionals,”** says Heuer.

Decarbonisation: Scope 2 Neutrality Achieved Since 2025

As part of the REHAU Group, REHAU Window Solutions has committed to the Science Based Targets initiative (SBTi) and is working consistently on its roadmap to reduce emissions.

Scope 2 neutrality with the exception of a few administrative sites with very low energy consumption was already achieved in 2025 – through renewable electricity on a balance sheet basis from power purchase agreements, photovoltaic installations and wind energy. For Scope 3, increasing recyclate content reduces emissions from raw materials by up to 88 percent. The sort-pure processing of hybrid materials and low-emission logistics solutions contribute additional reductions.

Transparency Through ESRS Reporting

REHAU Window Solutions documents all sustainability activities in accordance with the European Sustainability Reporting Standard (ESRS). Clear key performance indicators on recyclate use, CO₂ savings and resource conservation create transparency, verified content and confidence among investors and clients. In addition, REHAU Window Solutions is engaged as a member of the UN Global Compact in support of the Sustainable Development Goals and makes a substantial contribution as an active partner in VinylPlus, the EU-wide voluntary commitment of the PVC industry.

Full focus on window professionals

The innovations from REHAU Window Solutions at the Nuremberg world-leading trade fair focus on these growth modules:

- **Profile Solutions: High-Tech Materials for Top-Class Innovations.**
- **System Accessories with Added Value: Attractive Additional Options from a Single Source.**
- **Smart Products: Modern. Clever. Perfectly Integrated.**
- **Digitalisation Perfected. Simple. Efficient. Seamlessly Connected.**
- **Sustainability: Successfully implementing Responsibility.**
- **Unique Innovative Strength: Pioneering Technologies and Developments for New Additional Business Models.**

REHAU Window Solutions 2026.

All in One Partner. Tailored to Your Success.

Create Difference. Grow Business.

The REHAU Industries Division Window Solutions reinvents windows and doors every day. For a better life. Its unique recycling approach EcoPuls represents an unrivalled sustainability concept within the industry. As a thought leader and driver of future-ready industry solutions, REHAU Window Solutions is the leading All in One Partner for holistic system solutions along the entire value chain: Windows. Reinvented for modern life.

The REHAU Group brings together companies from the construction, industrial engineering, materials, medical, mobility and furniture sectors under one roof. With polymer-based solutions, this globally operating family business generates annual revenues of approximately EUR 3 billion. A pioneering spirit and visionary drive inspire more than 13,000 employees worldwide to improve people's lives through the application of innovative technologies. Engineering progress. Enhancing lives.
